

Deployment guideline for Single architecture robot

Control Software Installation on JETWAY

Prerequisites:

- Ensure you have an active internet connection for the initial installation.

Installation Steps:

1. **Extract the package:**
2. Unzip the downloaded package.
3. **Copy the deployment folder and run script:**
4. Open a terminal and navigate to the DEP_Deployment folder:

```
"cd ~/Desktop/DEP_Deployment"
```

2. Execute the deployment command:

```
". deploy_version $ROBOT"
```

3. Respond with **yes** or **no** to the prompts based on the robot configuration.

GUI Installation

Installation Steps:

1. **Navigate to the GUI directory:**

```
"cd ~/Desktop/DEP_Deployment"  
"unzip -o GUI .zip ~/Documents/"
```

2. **Extract backend and frontend packages:**

```
"cd ~/Documents/GUI"  
"dpkg-deb -X backend*.deb ~/Documents/GUI/backend"  
"dpkg-deb -X frontend*.deb ~/Documents /GUI/frontend"
```

3. **Restart the backend server**

Initialize the database for the first time

only do this step when installing the software for the first time

```
"cd ~/Documents/GUI/backend/install"  
"python3 init.py"
```

4. Run migration script:

```
"cd ~/Documents/GUI/backend/install"  
"python3 run_mygration.py"
```

Update center

Installation Steps:

```
"cd ~/Desktop/DEP_Deployment"  
"cp -r Update_Center $HOME"  
"cd $HOME/ Update_Center"  
". update_center_setup.sh"
```

Notes:

- Ensure all dependencies are installed before running the installation.
- The robot must be properly configured with the prompted question while updating.
- If any issues arise during installation, check for missing dependencies or incorrect file paths.

Troubleshooting:

- If the package extraction fails, ensure you have the correct package (not corrupted).
